Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that it is not obvious to combine the references cited. The office action must establish a reasonable motivation in the references or in the art in general for combining. The art in general understands that smart cards (although capable of processing) are not fast, high powered devices for computing. If a feature can be taken from the smart card and placed onto a stationery, full powered device (such as the reader), the limited processing of the smart card can be reserved for other, required features. Applicant also argues there are still elements not taught by the combination. Applicant further argues the references must be considered as a whole for what they teach to the ordinarily skilled artisan. Applicant suggests that the combination of the three references would derive at a system that is different than the claimed invention. This suggestion is an opinion of the applicant, and is not shown by fact. Applicant also argues that claims 5 and 6, which were taught by Menezes, further proves that the combination was non-obvious. The features of claims 5 and 6 were rejected by the applicant's admitted prior art (page 6, lines 1-8 of the specification) because the limitations in claims 5 and 6 were said to be well known as taught by the Menezes book. If applicant admits in the specification that some feature is well known, examiner is at liberty to use this admission in the rejection of the claims that pertain to the admission.
